

The Project

The City of Stockton, in cooperation with the San Joaquin Council of Governments (SJCOG), is in the early design phase for the Weber Avenue Streetscape Beautification Phase 2 Project. Potential streetscape beautification features include sidewalks; pedestrian corner bulb-outs, which shorten the path of pedestrians at intersections; sidewalk tree wells; landscaped medians; and street amenities such as benches, trash receptacles, bicycle racks, and decorative street lights. Currently, two alternatives are under consideration.

Phase 1 of the Weber Avenue Streetscape Beautification included the seven blocks between Center Street and Stanislaus Street. Phase 2 continues the street improvements from Stanislaus Street for three blocks to the Union Pacific Railroad tracks at the Robert J. Cabral ACE Station.

Funding

Funding for the design of this project is made possible through a Measure K Smart Growth Incentive Program grant administered through the San Joaquin Council of Governments and matching City of Stockton Measure K Local Street Repair funds.
